

Equipotential Earth Mat

EQPMAT—EQUIPOTENTIAL EARTH MAT

The Equipotential Earth Mat (UNIMAT) is a portable, rollup, lightweight, aluminium earth mat designed to eliminate step and touch potential dangers.

It is 800mm x 600mm in size and manufactured to a Western Power specification and comes with a 2m x 35sqmm earth lead with heavy duty spring clamp for clipping on to switching handles, metal cabinets etc to create a safe working environment for electrical personal.

By attaching the earth clamp to the equipment that is being worked on, it places the worker at the same potential as the equipment, when he stands on the mat, thereby eliminating the danger of any potential difference.

The aluminium mat has a low profile and is held together with multistrand street cable that creates an even across the mat which is typically below 100 milli-ohms.
