

MPU690 PROVING UNIT

Overview

Good practice requires that two pole voltage detectors are proved to be functioning correctly on a known voltage source, both before and after they have used to verify that a circuit is not live.

The Megger MPU690 proving unit provides a portable battery operated voltage source that can verify the correct functioning of a two pole voltage Detectors.

- ◆ 5 stepped nominal output voltages
- ◆ Automatic operation
- ◆ High output power suitable for test lamps
- ◆ Extended battery life
- ◆ Magnetic base
- ◆ Rugged case
